

Sometimes you will want to include text exactly as it appears on a terminal screen. For example, you might want to include part of a computer program. Not only do you want L^AT_EX to stop playing around with the layout of your text, you also want to be able to type all the characters on your keyboard without confusing L^AT_EX. The `verbatim` environment has this effect:

```
The section of program in
question is:
\begin{verbatim}
{ this finds %a & %b }

for i := 1 to 27 do
  begin
    table[i] := fn(i);
    process(i)
  end;
\end{verbatim}
```

```
The section of program in question is:

{ this finds %a & %b }

for i := 1 to 27 do
  begin
    table[i] := fn(i);
    process(i)
  end;
```
